#### **ABSTRACT**

In an effort to assess community college students' knowledge of the liberal arts, the Center for the Study of Community Colleges developed and field-tested a student survey and General Academic Assessment (GAA) instrument. The GAA was completed by a sample of 8,024 students at four large, urban community college districts. The scores were cross tabulated by selected student characteristic variables (e.g., age, ethnicity, native language, and reason for attending college) and selected educational background variables (e.g., the number of college units already completed by the student, and the number of English courses the student had taken prior to the GAA test). On the literacy section of the GAA, which assessed student ability in English grammar, punctuation, and reading ability, older students scored slightly higher than younger students. Not surpisingly, native language seemed an important factor in a student's ability to use English. Students attending college to satisfy personal interest scored higher on the literacy section than those intending to transfer or receiving occupational training. There appeared to be a positive correlation between the number of semester hours completed and scores on the literacy section of the GAA. A positive correlation was revealed between the number of English courses taken and the students' GAA literacy scores. (EJV)

#### STUDENT ASSESSMENT - LITERACY

In an effort to assess community college students' knowledge of the liberal arts, the Center for the Study of Community Colleges developed and field-tested a student survey and general academic assessment. This General Academic Assessment (GAA) has representative numbers of items in the humanities, sciences, social sciences, mathematics, and English usage. In addition, it contains such background items about the students as age, the number of college credits earned, educational and occupational aspirations, self-assessment of their skills, and the number of liberal-arts courses taken.

During 1983 and 1984, a sample of 8,824 students at four large urban community college districts (Los Angeles, Chica; Miami-Dade, and St. Louis) completed the GAA instrument. "...3 sample was obtained by taking every twentieth eligible class section in each of the districts! schedule of classes. Only sections with academic transfer-credits were eligible; students taking remedial classes, vocational-technical classes, adult education, or community services courses exclusively were not included.

This ERIC digest examines how well the students did on the literacy portion of the GPA. The nature of the literacy test items is first discussed, followed by a series of tables that detail scores by ethnicity, age, and educational background.

Test items in the literacy section of the GAA assess student ability in English grammar, punctuation and recding comprehension. An example is provided below:

Grammar. Each sentence below may contain an error in grammar (wrong form of verb, noun, pronoun, adjective, adverb). A few sentences are correct as they stand. Circle the letter indicating the error, if any. If there is no error in the sentence, circle the letter  $\underline{E}$  on the answer sheet.

- 1. As she entered the bus the woman said, "There's no seats in A B C the back; let's stand here by the door." (No error)
- 2. The only weakness that lowers the grades on my English  $\alpha$  B  $\alpha$  C themes are the errors in spelling. (No error)  $\alpha$  E

Items were provided by the City Colleges of Chicago. Selection was made by panels of staff members from community is in Chicago, Dallas, Los Angeles, Miami, Phoenix and St.

Louis. A total of 60 items in English usage was used on the five forms of the 600.

Scores on the literacy section were aggregated and converted to ten-point scale scores.

In the following tables, the SAA scores are cross tabulated by selected Student Characteristic variables and selected Educational background variables. Student characteristics encompass age, ethnicity, native language, and reason for attending college; Educational background variables include the number of college units already completed by the student, and the number of English courses that the student has taken prior to the SAA test. Each table shows, in rank order, the mean literacy score on a scale of 1 to 18.

- I. 699 Scores Cross Tabulated by Student Characteristics
- A. Mean Scores by Student Age

In general, older students scored higher than younger students. However, the difference between high and low scores is less than one point.

Age	Mean	Number
Over 50	5. 71	176
41 - 5 <del>8</del>	5.30	386
31 - 40	5. 66	896
20 or less	4.99	3, 215
21 - 38	4.78	3, 245
Entire Population	4.94	7,838

B. Mean Scores by Whether or not English is the Native Language

Not surprisingly, native language seems an important factor in a student's ability to use English. However, when examined by ethnic group, native and non-native English speaking Hispanics not only show the smallest differential, but also scored second highest in each instance.

Ethnic Group	Hean/Yes	N	Hean/No	N	Differential
A11	5. 19	6, 095	4. 10	1,877	1.89
Asian	4.48	208	3.85	549	.63
Black	4.15	1,894	3.32	111	.83
Hispanic	4.77	599	4.35	817	.42
White	6.02	3,627	4.43	265	1.59
Other	4.77	223	3.59	189	. 98

# C. Mean Scores by Reason for Attending College

Students attend community colleges for a variety of reasons. Those attending to satisfy a personal interest scored higher on the literacy section than those intending to transfer or receiving occupational training.

Reason for Attending	Mean	Number	
Personal Interest	5.43	568	
Transfer	4.98	4,453	
Advance in Occupation	4.82	702	
Enter an Occupation	4.72	2,139	
Entire Population	4.93	7,862	

Students planning a career in the applied arts scored higher than any other career aspirations with a score of 5.29.

## D. Mean Scores by Solf-Assessment of Editing Skills

Students taking the GSA were asked to rate their own ability to edit written material as compared to other students at their college. Those who rated themselves highly also scored high on the literacy section of the GAA.

Rating	Hean	Number
Excellent	6.28	1, 656
Good	5. 98	2,992
Fair	4.58	3, 631
Poor	4. 16	886
Entire Population	4, 95	7,879

# II. GAR Scores Cross Tabulated by Educational Background

# A. Hean Scores by Number of Completed College Units

There appears to be a positive correlation between the number of semester hours completed and scores on the literacy section of the 690.

<u>Mean</u>	Number	
5.55	1,265	
4.96	1,055	
4.99	1,396	
4.83	1,635	
4.73	2,213	
•	5.55 4.96 4.99 4.83	

When compared by ethnic group, the rate of gain for Asian students was among the highest.

Ethnic Group	Mean	N	Mean	N	Differential
	9-14 Units		68 or mo units	. –	
Asian	3.69	166	4.63	138	. 94
Black	3.98	558	4.59	278	.61
Hispanic	4.56	429	4.56	197	8
White	5.52	936	6.68	567	1.16
Other	4.19	79	5.06	52	. 87

## B. Mean Scores by Number of English Courses Taken

A positive correlation is revealed between the number of English courses taken and the students' SAA literacy scores.

No. of English Courses	Mean	Number
Three or more	5.81	1,373
Two courses	5. 00	2,159
One Course	4.97	2, 033
None	4.87	1,974
Entire Population	4.96	7,539

The GAA is meant to assess students! knowledge of the liberal arts in community colleges. The literacy section, as well as the others, was designed specifically to assess the learning of cohorts of students, not individual students. The data from the GAA will be used as a tool to aid in program planning, curricular modifications, and to gauge institutional outcomes. More information about the GAA may be obtained from:
